3.1	Impedances of the LC – Tank	6			
3.2	Conductance of the LC – Tank.....	6			

1 Introduction

The purpose of this document is, to give a description of how to calculate G_{TX} , the conductance of the LC – Tank relating to the **ams** inductive position sensor AS5715.

2 Resonance Frequency

2.1 Resonance Frequency of the LC – Oscillator

Figure 1:
LC – Tank

The oscillating frequency, f_{TX} , depends on the LC – Tank and can be calculated according to the following equations.

Equation 1:

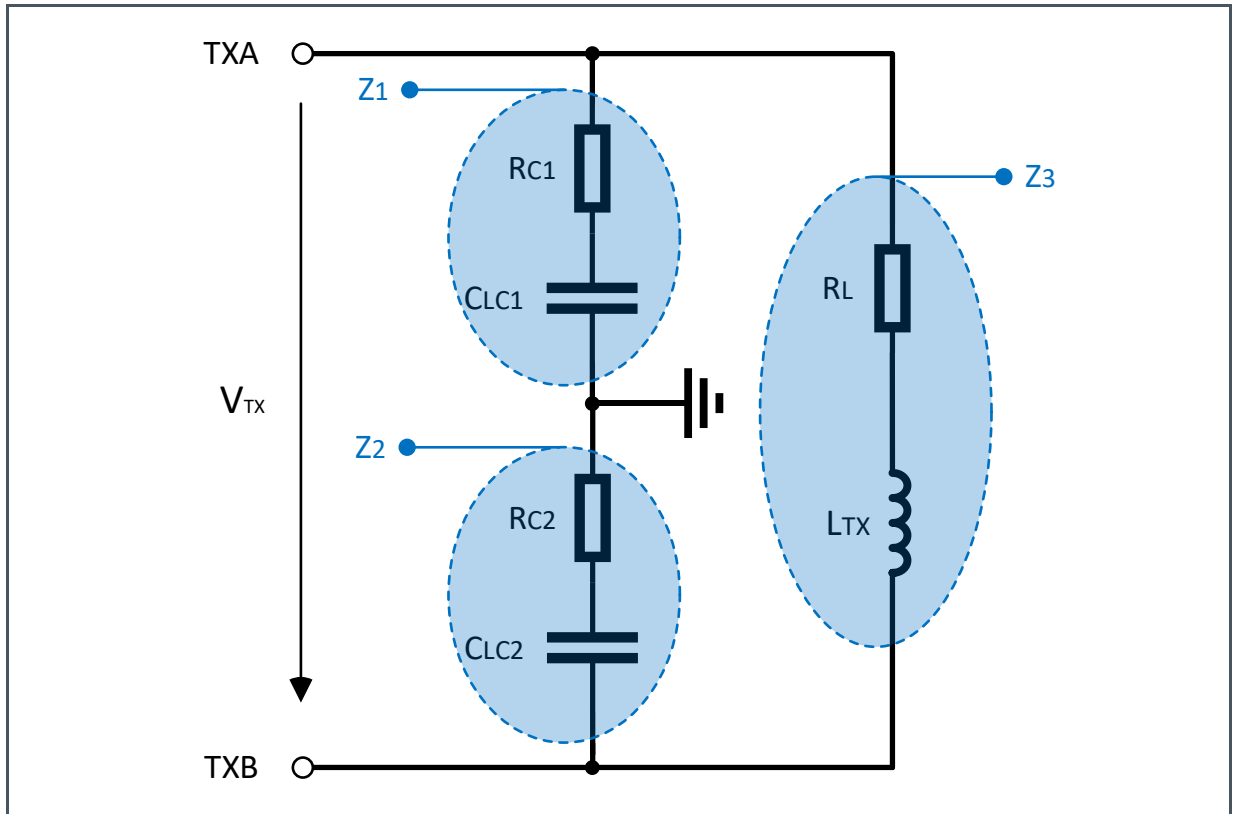

$$C_{LC-Tank} = \frac{C_{LC1} * C_{LC2}}{C_{LC1} + C_{LC2}}$$

Equation 2:

$$f_{TX} = \frac{1}{2 * \pi * \sqrt{L_{TX} * C_{LC-Tank}}}$$

3 Real Parallel Resonant Circuit

Figure 2:
Equivalent Circuit Diagram of the Real PRC

For the real parallel resonant circuit, the parasitic effects of the components must be taken into account.

The circuit diagram above is one example of how the resistive losses of the capacitors and the coil can be considered.

3.1 Impedances of the LC – Tank

In the following chapter it is described, how to calculate the partial impedances, the total impedance and subsequently the conductance of the LC – Tank.

3.1.1 Partial Impedances of the LC – Tank

Equation 3: Partial Impedances Z_{12} and Z_3

$$\begin{aligned}
 Z_1 &= R_{C1} - j * \frac{1}{\omega_0 * C_{LC1}} \\
 Z_2 &= R_{C2} - j * \frac{1}{\omega_0 * C_{LC2}} \\
 Z_3 &= R_L + j * \omega_0 * L_{TX}
 \end{aligned}
 \quad
 \left.
 \begin{array}{l}
 \\
 \\
 \end{array}
 \right\}
 \quad
 Z_{12} = Z_1 + Z_2$$

With $\omega_0 = 2 * \pi * f_{TX}$

3.1.2 Total Impedance of the LC – Tank

Equation 4: Total Impedance Z_0

$$Z_0 = \frac{Z_{12} * Z_3}{Z_{12} + Z_3} = Re\{Z_0\} + Im\{Z_0\}$$

3.2 Conductance of the LC – Tank

The LC – Tank Conductance is defined at $Im\{Z_0\}=0$.

When $Im\{Z_0\}=0$, then the system is in resonance and therefore:

Equation 5: G_{TX} , LC – Tank Conductance

$$G_{TX} = \frac{1}{Re\{Z_0\}}$$

4 Conclusion

The conductance determined by the given formulas is only an approximation.

Possible variations of the values for C_{LC1} , C_{LC2} and L_{TX} due to manufacturing tolerances or due to temperature changes are not taken into account.

It is recommended to measure the exact value of the LC – Tank conductance by using for example a network analyzer or a LCR Meter.

It must be ensured that the value of G_{TX} is within the specification over the entire temperature range of the application.

5 Revision Information

Changes from previous version to current revision v1-00	Page
Initial version	all

- Page and figure numbers for the previous version may differ from page and figure numbers in the current revision.
- Correction of typographical errors is not explicitly mentioned.

RoHS Compliant & ams Green Statement

RoHS Compliant: The term RoHS compliant means that ams AG products fully comply with current RoHS directives. Our semiconductor products do not contain any chemicals for all 6 substance categories plus additional 4 substance categories (per amendment EU 2015/863), including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, RoHS compliant products are suitable for use in specified lead-free processes.

ams Green (RoHS compliant and no Sb/Br/Cl): ams Green defines that in addition to RoHS compliance, our products are free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material) and do not contain Chlorine (Cl not exceed 0.1% by weight in homogeneous material).

Important Information: The information provided in this statement represents ams AG knowledge and belief as of the date that it is provided. ams AG bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. ams AG has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. ams AG and ams AG suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.
