AS1101, AS1102, AS1103, AS1104

Low-Dropout LED Drivers

Data Sheet

1 General Description

The AS1101/AS1102/AS1103/AS1104 are LED drivers designed to match current source bias for any color LED, including white and blue. The devices can drive up to 4 high-current LEDs, and the LED current is programmable using an external resistor (R_{SET}).

The AS1101 LED currents are $460 \times I_{SET}$ (per LED, typ) at an LED cathode voltage (V_{SAT}) of 150mV and $650 \times I_{SET}$ (typ) at a V_{SAT} of 1V, where I_{SET} is the current through R_{SET} connected to pin CTRL.

The AS1102, AS1103, and AS1104 LED currents are $230 \times I_{SET}$ (per LED, typ) at a V_{SAT} of 150mV and $325 \times I_{SET}$ (typ) at a V_{SAT} of 1V.

The AS1101, AS1102, and AS1104 incorporate a chip-enable feature via pin ON. When the devices are disabled, the supply current drops to less than $1\mu A$.

The AS1101, AS1102, and AS1103 are available in a 6-pin SC70 package; the AS1104 is available in a 8-pin MSOP package.

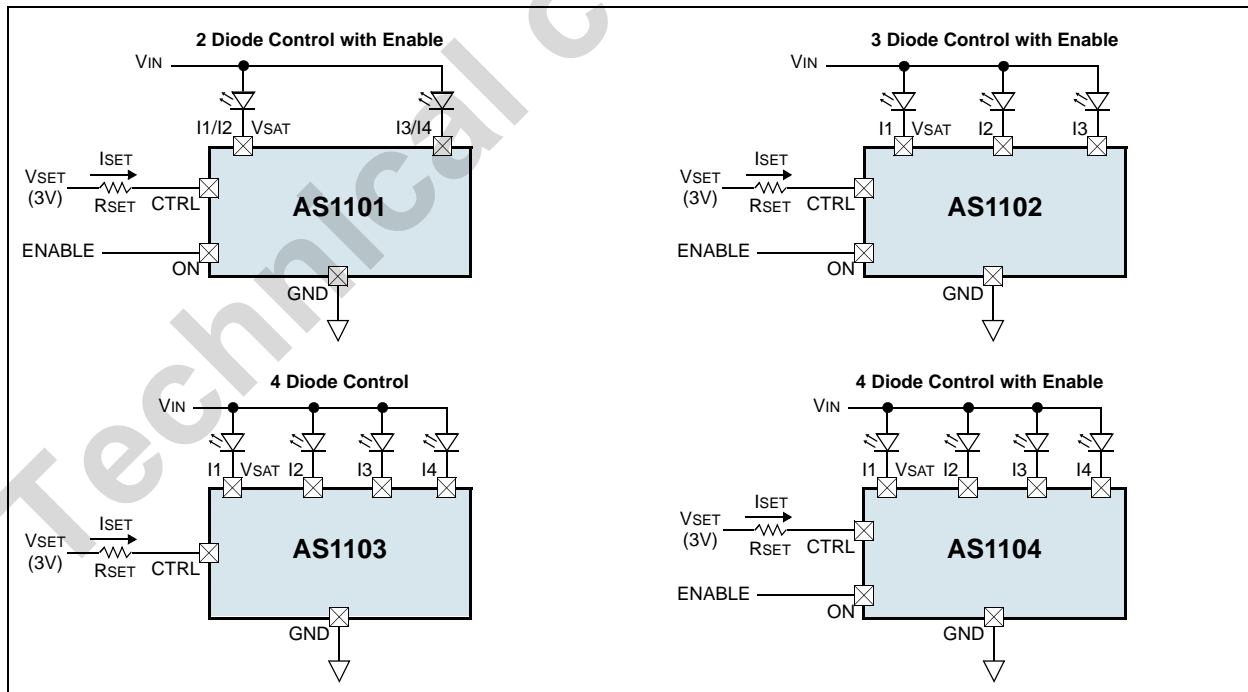

2 Key Features

- LED Drivers for Parallel-Connected LEDs
- Ultra-Low Voltage Drop: Less Than 150mV (for Li-ion Battery Support)
- Analog and PWM Brightness Control
- Up to 80mA per LED (AS1101)
- Up to 40mA per LED (AS1102, AS1103, AS1104)
- No Electromagnetic Interference, No Switching-Noise
- Current-Matching Requires No External Components
- Active-Low Shutdown Mode (AS1101, AS1102, and AS1103)
- Low Shutdown-Current: Less Than $1\mu A$
- SC70-6 Package (AS1101, AS1102, and AS1103)
- MSOP-8 Package (AS1104)

3 Applications

The AS110x devices are ideal for LED displays and keyboard backlights, as well as lighting management units for battery powered audio devices such as MP3 and CD players, mobile and cordless phones, PDAs, portable DVD players, and consumer electronics.

5 Absolute Maximum Ratings

Stresses beyond those listed in [Table 2](#) may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those listed in [Electrical Characteristics on page 4](#) is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

8 Application Information

Figure 19. Typical Application Diagrams

Setting the LED Current

The current going into the LEDs is approximately OCMR times greater than the current ISET. LED current is controlled by VSET and RSET (see Figure 19) according to the formula:

$$I_{LED} = OCMR \times (V_{SET} - V_{CTRL}) / R_{SET} \quad (EQ 1)$$

For VSET = 3V and a specific LED current, the value of RSET can be determined using the graphs shown in Figure 9, Figure 10, and Figure 11 on page 7. For any other option, the value of ISET can be determined using the graph in Figure 3 on page 6.

Note: LED brightness can also be adjusted by driving pin ENABLE or pin CTRL with a PWM signal.
